

assignment * W A S to check whether the given num is odd or even.

→ #! /bin/bash

read -p "Please enter the number: " num

if [\$((\$num % 2)) -eq 0];

then

echo "\$num is Even"

else

echo "\$num is Odd"

fi

assignment * what is special permissions in linux.

→ Special Permission in Linux are additional file permissions that provide special access control beyond the normal read (r), write (w), execute (x) permissions.

① ① SUID (Set User ID), Symbol = S, Numerical Value = 4

* when an executable file has the SUID bit set, it runs with the permissions of the file owner, not the user who executes it.

ex = The passwd command uses SUID so users can change their passwords.

* Command = `chmod 4555 filename`.

② ② SGID (Set Group ID), (s), Numerical Value = 2.

On an executable file, it runs with the permission of the file's group.

* Command = `chmod 2755 directoryname`

③ ③ Sticky Bit (t) (1)

* Used mainly on directories

* Only the file owner, directory owner, or root can delete or rename files inside the directory.

* ex = /tmp directory

* Command = `chmod 1777 directoryname`
